Sir,

Re - Improvement of Water-Supply to Mysore City

I have the honour to state that of late complaints regarding insufficient water-supply to certain parts of the city and total want of water supply to certain other parts of the city are being received almost every day, by the Municipal Councillors and the undersigned As the situation became acute, it was thought desirable to call for a special meeting of the Municipal Council and concert measures for the improvement of water supply to the city Certain Municipal Councillors also sent a resolution in the matter for being discussed at a special meeting The Special Meeting of the Council was held on the 10th February 1944 and the Superintendent, Vani Vilas Water Works, Mysore, was also present in the meeting on request The Superintendent explained that in view of the non-availability of materials it was not possible to enhance the supply of water, but that steps should be taken to economise the wastage of water in many houses which had no meters or which had extensive gardens in their compounds, and supply the quantity thus saved, to higher localities where there was no sufficient supply of water He suggested that the best way was to install meters whereby the people would be forced to use only the barest minimum of water required But meters are not available now The next best step would be to ferrule the pipe connections

which had very copious supply of water on account of their lower situation, whereby the velocity of flow would be reduced, and wastage of water would be minimised to a certain extent He further said that by judicious ferruling and control of water-supply to different localities at fixed hours, all the localities could be given better supply of water Accordingly, the Council resolved that the Superintendent might ferrule certain parts of the city, as an experimental measure in cases where the flow of water in the taps is more than one gallon per minute, in consultation with the Municipality, that a definite programme of rotation, control and supply of water in various parts of the city might be drawn up by the Superintendent, the public being duly informed of the same and that the Industrial Concerns, Parks and Gardens be requested to sink wells for their use in order to minimise the use of filtered water A copy of Council's resolution No 539 has already been submitted to Government with letter No M5-4-40/43-44 dated 6-3-1944 (copy enclosed herewith for ready reference)

In accordance with this resolution, the Superintendent gave a programme and the public were duly informed of this by means of printed notices Two months have elapsed since that meeting, but the complaints regarding inadequacy of water-supply have not ceased An estimate for ferruling was sanctioned by the Council and funds placed with the Sanitary Department There have been no signs of improvement The situation has become worse Water is not being supplied according to this programme Complaints have become incessant So, it was considered necessary to call for another special meeting to concert measures for improvement of water supply Accordingly a special meeting of the Council was held on the 8th April 1944 when the Director of Public Health in Mysore and the Superintendent, Vani Vilas Water Works were also present The Members explained how people have been suffering for want of water, though the

Municipal Council has been liberal in paying for all improvement works The Municipal Council have done and are doing what all they could towards satisfactory supply of water to the city and the responsibility of maintaining the system in an efficient condition is entirely dependent upon the Sanitary Department A sum of Rs 41,112 has been paid to the Sanitary Department recently for special improvement of water-supply to certain badly affected areas such as Vani Vilas Mohalla, Mandy, Narasimharaja Mohalla and Lakshmipuram But the Sanitary Department have not carried out these improvement works, perhaps for want of materials The Councillors have brought to notice that the rate-payers rightly complain that though they pay their taxes regularly the Municipality and the Councillors have not discharged their obligations in this regard properly The taxpayers do not know that the management of water supply to the city is not vested in the Municipal Council, but it vests with the Sanitary Department The Council will readily consider any scheme for improvement of water-supply since the city has grown an all directions and industrial concerns have increased but the machinery and pumps which were designed for water-supply to about 1 lakh of people have been supplying water for nearly double that number The Director of Public Health who was present explained that the full capacity of the pumps is 4 7 million gallons per day, but that as one of the motors was very old, on the advice of the Superintendent, Cauvery Power Scheme, only 4 2 million gallons are being pumped An estimate for Rs 20,000 for a standbye unit was countersigned by me some months back and was sent to the Sanitary Engineer It is learnt that orders have been placed for its supply

Besides, the capacity of the filters and mains is limited so that more water cannot be made available as otherwise the mains would burst The city has extended in all the

directions and there are many ups and downs, and it is rather difficult for water to push through in the end regions Moreover, 1,500 connections have been given from the mains In the next place, water is led into wells and garden in a number of houses, thus causing wastage of filtered water which would otherwise have been used profitably for domestic purposes Due to these reasons, there has been difficulty in giving adequate supply of water to all the areas The Council next considered the methods for overcoming the immediate difficulties and also remedy the defects permanently The Councillors requested the Director of Public Health to get all necessary materials and increase the pumping capacity The Director of Public Health said that in Bangalore the average consumption per head is 14 to 15 gallons, while in this city it ranged from 21 to to 25 gallons per head and so attempts should be made to reduce wastages in certain houses as they could be used more profitably by other people He further assured the Council that he would arrange to set right the defects as far as possible in a fortnight's time and if he does not ~~be~~ completely succeed in this, he would give an alternative scheme

After discussions were over, the following resolutions moved by Mr P Sitharamiah and seconded by Mr T Verkataramaniah were passed -

1 " That this Council with great pain brings to the notice of Government the great distress the citizens of this city are suffering for want of sufficient water supply and requests the Government to take immediate steps to ameliorate water scarcity in the city of Mysore

2 "That in view of the assurance given by the Director of Public Health that he would see to the improvement on the lines discussed, within a fortnight and that if it is not possible, he would give an alternate scheme This Council would await the report and the President be requested to call for another meeting to consider the report after it is received "

Copies of the resolutions are enclosed herewith with a request to arrange for getting a comprehensive scheme to pump, filter and distribute 5 to 6 million gallons of water per day, and also to arrange for immediate improvement in the present situation

I have the honour to be,
Sir,
Your most obedient servant,

PRESIDENT

SNR/-

whereas it is found that there has been great difficulty in getting proper and sufficient water supply from the Vani Vilas Water Works in various parts of Mysore City and that the summer months are soon approaching the undersigned members of the Municipal Council find it desirable to discuss this matter at a Special General Meeting of the Municipal Council and formulate necessary and urgent proposals and take necessary and urgent steps to give necessary relief to the people in getting adequate supply of water to the citizens of Mysore

After a detailed discussion of the subject the following resolutions (moved by Mr P Sitaramiah and seconded by Mr T Venkataramaniah) were passed

1 The Superintendent of the Vani Vilasa Water Works be requested imme diately to take up those works for which the Municipality has already sanctioned the necessary amounts
2 This Council is of opinion that filtered water as far as possible be used only for demestic purposes
3 This Council is of opinion that the system of "Ferrling" be introduced as an experimental measure only in such parts of the City of Mysore, in cases where the flow of water in the taps is more than one gallon per minute
4 This council is of opinion that all Industrial concerns parks and Gardens be requested to sink wells in order to minimise the use of filtered water from the taps for their use
5 This Council is of opinion that the Superintendent, Vanivilas Water Works should be requested to furnish with a list of house connections to be ferruled in the city—Mohallawar
6 Further resolved that the Superintendent, Vani Vilas Water Works be requested to kindly draw up definite programme of rotation, control and supply of water in the various parts of Mysore City, the public being duly informed about the regulated hours by means of hand bills, notices, etc regarding the control and supply

540 Consideration of the Annual Maintenance estimates of the Vani Vilasa Water Works for the year 1943 44

May be referred to the Managing Committee
